ETL Script Documentation Report

Script: etl_customer_360.sql

Parsed Information

Type: SQL

Sources: customers, raw_transactions

Targets: dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv

Transformations: group by, CTE/subquery, window function, order by, string transform, aggregation: count, aggregation: sum, join, aggregation: avg, partition, case/conditional, aggregation: max, filter/condition, deduplication

Auto-Generated Documentation

Overview

etl_customer_360.sql is a SQL ETL script that reads data from customers, raw_transactions, applies transformations, and loads results into dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv.

What It Does

- Reads from: customers, raw_transactions
- Applies: group by, CTE/subquery, window function, order by, string transform, aggregation: count, aggregation: sum, join, aggregation: avg, partition, case/conditional, aggregation: max, filter/condition, deduplication
- Writes to: dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv

Technical Summary

- Script Type: SQL
- Input(s): customers, raw_transactions
- Output(s): dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv
- Operations: group by, CTE/subquery, window function, order by, string transform, aggregation: count, aggregation: sum, join, aggregation: avg, partition, case/conditional, aggregation: max, filter/condition, deduplication

Business Purpose

Business Purpose

This script automates processing of data from customers, raw_transactions into dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv for reporting, dashboards, and business decisions.

Risk if Fails

If etl_customer_360.sql fails, dim_customer_segments, stg_clean_transactions, rpt_customer_360, stg_customer_ltv will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 4 output(s) but no other scripts directly.

Depends on: ['customers', 'raw_transactions']

Writes to: ['dim_customer_segments', 'stg_clean_transactions', 'rpt_customer_360', 'stg_customer_ltv']

Affected scripts if fails: None

ETL Script Documentation Report

Script: etl_finance_summary.sql

Parsed Information

Type: SQL

Sources: raw_expenses, departments

Targets: stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual

Transformations: group by, window function, order by, aggregation: min, aggregation: count, join, aggregation: sum, aggregation: avg, null handling, left join, string transform, numeric transform, case/conditional, aggregation: max, filter/condition, deduplication

Auto-Generated Documentation

Overview

etl_finance_summary.sql is a SQL ETL script that reads data from raw_expenses, departments, applies transformations, and loads results into stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual.

What It Does

- Reads from: raw_expenses, departments
- Applies: group by, window function, order by, aggregation: min, aggregation: count, join, aggregation: sum, aggregation: avg, null handling, left join, string transform, numeric transform, case/conditional, aggregation: max, filter/condition, deduplication
- Writes to: stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual

Technical Summary

- Script Type: SQL
- Input(s): raw_expenses, departments
- Output(s): stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual
- Operations: group by, window function, order by, aggregation: min, aggregation: count, join, aggregation: sum, aggregation: avg, null handling, left join, string transform, numeric transform, case/conditional, aggregation: max, filter/condition, deduplication

Business Purpose

Business Purpose

This script automates processing of data from raw_expenses, departments into stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual for reporting, dashboards, and business decisions.

Risk if Fails

If etl_finance_summary.sql fails, stg_departments, fact_vendor_spend, stg_raw_expenses, fact_monthly_expenses, rpt_budget_vs_actual will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 5 output(s) but no other scripts directly.

Depends on: ['raw_expenses', 'departments']

Writes to: ['stg_departments', 'fact_vendor_spend', 'stg_raw_expenses', 'fact_monthly_expenses', 'rpt_budget_vs_actual']

Affected scripts if fails: None

ETL Script Documentation Report

Script: etl_hr_payroll.py

Parsed Information

Type: PYTHON

Sources: data/attendance.csv, data/employees.csv, data/deductions.xlsx

Targets: hr.db

Transformations: sort_values, new column: gross_pay, merge, new column: net_pay, apply, new column: attendance_pct, drop_duplicates, new column: deduction_amount, filter/condition, fillna

Auto-Generated Documentation

Overview

etl_hr_payroll.py is a PYTHON ETL script that reads data from data/attendance.csv, data/employees.csv, data/deductions.xlsx, applies transformations, and loads results into hr.db.

What It Does

- Reads from: data/attendance.csv, data/employees.csv, data/deductions.xlsx
- Applies: sort_values, new column: gross_pay, merge, new column: net_pay, apply, new column: attendance_pct, drop_duplicates, new column: deduction_amount, filter/condition, fillna
- Writes to: hr.db

Technical Summary

- Script Type: PYTHON
- Input(s): data/attendance.csv, data/employees.csv, data/deductions.xlsx
- Output(s): hr.db
- Operations: sort_values, new column: gross_pay, merge, new column: net_pay, apply, new column: attendance_pct, drop_duplicates, new column: deduction_amount, filter/condition, fillna

Business Purpose

Business Purpose

This script automates processing of data from data/attendance.csv, data/employees.csv, data/deductions.xlsx into hr.db, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on hr.db for reporting, dashboards, and business decisions.

Risk if Fails

ETL Script Documentation Report

If etl_hr_payroll.py fails, hr.db will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 1 output(s) but no other scripts directly.

Depends on: ['data/attendance.csv', 'data/employees.csv', 'data/deductions.xlsx']

Writes to: ['hr.db']

Affected scripts if fails: None

ETL Script Documentation Report

Script: etl_product_analytics.py

Parsed Information

Type: PYTHON

Sources: data/orders.csv, data/returns.csv, data/products.csv, data/categories.csv

Targets: N/A

Transformations: new column: revenue, agg, merge, reset_index, apply, new column: return_rate, new column: performance_grade, new column: is_returned, groupby, filter/condition

Auto-Generated Documentation

Overview

etl_product_analytics.py is a PYTHON ETL script that reads data from data/orders.csv, data/returns.csv, data/products.csv, data/categories.csv, applies transformations, and loads results into N/A.

What It Does

- Reads from: data/orders.csv, data/returns.csv, data/products.csv, data/categories.csv
- Applies: new column: revenue, agg, merge, reset_index, apply, new column: return_rate, new column: performance_grade, new column: is_returned, groupby, filter/condition
- Writes to: N/A

Technical Summary

- Script Type: PYTHON
- Input(s): data/orders.csv, data/returns.csv, data/products.csv, data/categories.csv
- Output(s): N/A
- Operations: new column: revenue, agg, merge, reset_index, apply, new column: return_rate, new column: performance_grade, new column: is_returned, groupby, filter/condition

Business Purpose

Business Purpose

This script automates processing of data from data/orders.csv, data/returns.csv, data/products.csv, data/categories.csv into unknown targets, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on unknown targets for reporting, dashboards, and business decisions.

Risk if Fails

ETL Script Documentation Report

If etl_product_analytics.py fails, unknown targets will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: LOW

Reason: This script has no downstream dependencies.

Depends on: ['data/orders.csv', 'data/returns.csv', 'data/products.csv', 'data/categories.csv']

Writes to: None

Affected scripts if fails: None

ETL Script Documentation Report

Script: etl_sales_pipeline.py

Parsed Information

Type: PYTHON

Sources: data/sales_transactions.csv, data/customers.csv

Targets: sales_summary

Transformations: new column: revenue, merge, apply, new column: sale_year, dropna, new column: sale_month, new column: net_revenue, new column: discount_applied, new column: customer_segment, filter/condition, fillna

Auto-Generated Documentation

Overview

etl_sales_pipeline.py is a PYTHON ETL script that reads data from data/sales_transactions.csv, data/customers.csv, applies transformations, and loads results into sales_summary.

What It Does

- Reads from: data/sales_transactions.csv, data/customers.csv
- Applies: new column: revenue, merge, apply, new column: sale_year, dropna, new column: sale_month, new column: net_revenue, new column: discount_applied, new column: customer_segment, filter/condition, fillna
- Writes to: sales_summary

Technical Summary

- Script Type: PYTHON
- Input(s): data/sales_transactions.csv, data/customers.csv
- Output(s): sales_summary
- Operations: new column: revenue, merge, apply, new column: sale_year, dropna, new column: sale_month, new column: net_revenue, new column: discount_applied, new column: customer_segment, filter/condition, fillna

Business Purpose

Business Purpose

This script automates processing of data from data/sales_transactions.csv, data/customers.csv into sales_summary, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on sales_summary for reporting, dashboards, and business decisions.

Risk if Fails

ETL Script Documentation Report

If etl_sales_pipeline.py fails, sales_summary will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 1 output(s) but no other scripts directly.

Depends on: ['data/sales_transactions.csv', 'data/customers.csv']

Writes to: ['sales_summary']

Affected scripts if fails: None

ETL Script Documentation Report

Script: sample_hr.py

Parsed Information

Type: PYTHON

Sources: data/attendance.csv, data/employees.csv

Targets: hr_report, database/etl_docs.db

Transformations: merge, filter/condition, new column: bonus

Auto-Generated Documentation

Overview

This script reads from data/attendance.csv, data/employees.csv and writes to database/etl_docs.db, hr_report.

What It Does

- Sources: data/attendance.csv, data/employees.csv
- Transformations: new column: bonus, filter/condition, merge

Output

Writes to: database/etl_docs.db, hr_report

Business Purpose

Business Purpose

This script automates processing of data from data/attendance.csv, data/employees.csv into hr_report, database/etl_docs.db, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on hr_report, database/etl_docs.db for reporting, dashboards, and business decisions.

Risk if Fails

If sample_hr.py fails, hr_report, database/etl_docs.db will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 2 output(s) but no other scripts directly.

Depends on: ['data/attendance.csv', 'data/employees.csv']

ETL Script Documentation Report

Writes to: ['hr_report', 'database/etl_docs.db']

Affected scripts if fails: None

ETL Script Documentation Report

Script: sample_orders.py

Parsed Information

Type: PYTHON

Sources: data/orders.csv

Targets: big_orders, database/etl_docs.db

Transformations: rename, filter/condition, new column: processed

Auto-Generated Documentation

Overview

This script reads from data/orders.csv and writes to database/etl_docs.db, big_orders.

What It Does

- Sources: data/orders.csv

- Transformations: new column: processed, rename, filter/condition

Output

Writes to: database/etl_docs.db, big_orders

Business Purpose

Business Purpose

This script automates processing of data from data/orders.csv into big_orders, database/etl_docs.db, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on big_orders, database/etl_docs.db for reporting, dashboards, and business decisions.

Risk if Fails

If sample_orders.py fails, big_orders, database/etl_docs.db will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 2 output(s) but no other scripts directly.

Depends on: ['data/orders.csv']

ETL Script Documentation Report

Writes to: ['big_orders', 'database/etl_docs.db']

Affected scripts if fails: None

ETL Script Documentation Report

Script: sample_sales.sql

Parsed Information

Type: SQL

Sources: customers, orders

Targets: sales_summary

Transformations: group by, aggregation: count, aggregation: sum, join, filter/condition

Auto-Generated Documentation

Overview

This script reads from orders, customers and writes to sales_summary.

What It Does

- Sources: orders, customers

- Transformations: aggregation: count, aggregation: sum, group by, join, filter/condition

Output

Writes to: sales_summary

Business Purpose

Business Purpose

This script automates processing of data from customers, orders into sales_summary, eliminating manual data handling and ensuring data is always current.

Who Benefits

Data and analytics teams who depend on sales_summary for reporting, dashboards, and business decisions.

Risk if Fails

If sample_sales.sql fails, sales_summary will not be updated ? causing stale or missing data in all downstream reports.

Impact Analysis

Risk Level: MEDIUM

Reason: Failure affects 1 output(s) but no other scripts directly.

Depends on: ['customers', 'orders']

Writes to: ['sales_summary']

Affected scripts if fails: None
